

# Grout Cleaning

## Restoration

...sisting of an Alkaline Cleaner to remove built-up soils, followed by an Acid...

...restoration process. The first step is to apply a strong alkaline cleaner to the grout lines to break down the dirt and grime. This is followed by a thorough scrubbing process using a stiff brush or a mechanical grout cleaning tool. The second step is to apply an acid-based grout restorer to the cleaned grout lines. This product helps to seal the grout and restore its original color and texture. The final step is to rinse the floor thoroughly with water to remove any residue from the cleaning process.
